

Enterprise BI Strategy Roadmaps

A BI Roadmap is created with the following considerations and can be successfully delivered in 2-8 weeks

Start your Business Intelligence Program Today!

- Understand critical business strategies throughout the organization (division or business functional area)
- Determine which BI projects will return the most significant value, then prioritize
- Determine technical feasibility within the current data architecture, then reassess the priority of known BI projects
- Determine what BI platform support will be required to meet current and future needs (assessing front end, back end, meta data, data architecture, tech architecture, program management, etc)
- Determine the gap between current and future state
- Build a BI roadmap considering:
 - Critical Business Strategy and BI Project Priority
 - Current and Future State Gap
 - Project Delivery Method & Approach
 - Project Scope and Project Requirements Definition
 - Tasks, Task Dependency, Effort, Resources, Delivery, Risk, Constraints, etc
- Communicate the vision and strategy to stakeholder

You need a roadmap that aligns with your organizations overall BI and data management strategy

TriCore Provides:

- Over 500 successful BI implementations and counting
