

Oracle SOA Integration Services

A SOA based approach to system integrations is now the de-facto standard for business application integrations. Using a SOA based approach leverages the benefits of Service Oriented Architecture to solve one of the most challenging tasks in IT – building and supporting complicated system integrations.

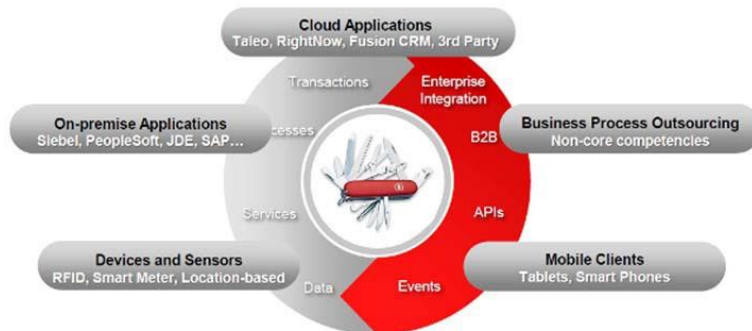

TriCore brings tremendous experience with building flexible and supportable SOA based integrations. Whether you are integrating your Oracle EBS application to a SaaS solution like Salesforce.com, to an internally developed 2nd and 3rd generation custom system, legacy mainframe system or to another 3rd party commercial application, TriCore’s team of integration experts can assist.

Service Oriented Architecture Applied to Integration

SOA integration capitalizes on the lessons learned and benefits of Service-Oriented Architecture to make better use of system assets by transforming them into web services that can be shared and reused across the enterprise. As part of its core capabilities, SOA integration provides a framework for enabling services, data, and events, and connecting them to better align with business requirements.

Why use SOA Middleware approach for your Integrations?

- Enables Platform independence
- Delivers Scalability
- Provides High Availability
- Supports and enables Cloud
- Eases pain on Integration with loose coupling
- Allows Agility and flexibility

TriCore Provides:

- An award winning Oracle partnership
- Effective project tracking and monitoring
- Oracle certified consultants
- Professionalism and Experience
- 75+ years of combined experience in SOA Suite and Fusion Middleware products and technologies
