

The Application Management Experts

## Securing the App

How secure is your infrastructure in protecting against malicious activities or policy violations? Failure to detect an intrusion on your environment can have serious repercussions. At TriCore we offer our industry leading solutions for Securing the Application. Whether your infrastructure is hosted in a data center, on premise or somewhere in the cloud, we can provide you with our Securing the Application solutions take away the worry of data compliance and security.

Our Securing the Application portfolio consists of a variety of options to meet the needs of your business. These various solutions will continually assess and monitor your environment ensuring your data remains safe and audit-ready.

So what is in our portfolio?

### Threat Manager

Threat Manager provides intrusion detection, intrusion prevention, vulnerability assessment and security event management in one integrated solution. Threat Manager includes a hardened sensor appliance, expert system analysis, sensor tuning and optimization, on-going threat and vulnerability signature updates, full IDS capability, asset identification and criticality ranking, automated blocking, containment and quarantine, vulnerability assessments and reporting and a full-functioning web portal view.

### Web Security Manager

Web Security Manager is a managed web application firewall that protects against web application attacks identified by industry security standards, as well as data leakage and other vulnerabilities, and assists with DoS and DDoS mitigation. Web Security Manager profiles, analyzes and protects web applications using both positive and negative security technologies.

### Log Manager

Log Manager collects, stores, reports and correlates log data off the customer network. The Log Manager is deployed with an appliance within the customer environment, which is centrally managed our Security Operations Center. Log data is consolidated with or without agents on the LM appliance and processed before being forwarded to our highly secure, redundant data centers.

### TriCore Provides:

- Advanced Network Protection
- Advanced Features for an Evolving Threat Landscape
- Manage Logs from all Environments from a Single Console
- Fully Managed Security as a Service
- 24x7 Monitoring and Incident Escalation

### Strategic Partnerships

**TriCore takes the worry out of data compliance and security.**

### Advanced Network Protection

With our network protection solution you can protect your network against internal and external threats, no matter how fragmented your IT world has become. We provide you with a cloud-powered vulnerability assessment and intrusion detection solution that is delivered using a Software-as-a Service model. Along with Threat Manager, ActiveWatch provides 24x7 monitoring and expert guidance services from our security operations center (SOC).

### Advanced Features for Evolving Threat Landscape

With the continuing growth of online commerce, web applications have become the primary target for malicious attacks. Hackers are now leveraging protocol or application vulnerabilities to commit data theft, cause denial of service or deface web sites. Threat Manager helps solve these challenges by delivering intrusion detection and visibility into critical web-based infrastructure vulnerabilities, including the handling of Ajax and SQL injection technologies. Threat Manager also includes an optional SSL decryptor that actively decrypts SSL traffic and helps detect attacks that may come in over encrypted SSL channels.

### Manage Logs from a Single Console

An easy, agent-based solution that manages logs from all environments from a single console.

- Supports private, VPC, public and hybrid environments
- Fast automated host provisioning
- Supports Windows, Syslog, Flat File log collection
- Agent framework extendable to quickly support new log sources
- Agents auto-provision & auto-update for simplified installation and management
- Eliminates need for on-site log collection appliance

### Fully Managed Security-as-a-Service

Delivering Security-as-a-Service means fast, simple implementation with no capital expenses and predictable monthly fees – no software upgrades.

- Rapidly deploy and scale as needed
- No upgrades or Patching – you always have the current product
- No hidden costs

### 24x7 Monitoring and Incident Escalation

ActiveWatch provides 24x7 monitoring and incident escalation by certified security analysts, along with ongoing tuning and management of the WAF, protecting your websites and business critical applications from web application attacks, including zero-day exploits and emerging threats.
